

Be Part of Research Immune-Mediated Inflammatory Diseases (IMIDs)

The NIHR BioResource is a panel of over 150,000 volunteers across England, with or without health conditions, who have agreed to be contacted for research studies.

Immune-Mediated Inflammatory Diseases (IMIDs) are a wide group of common health conditions which cause inflammation in the body. IMIDs can affect different parts of the body, but all work by triggering the body's immune system to fight itself, causing inflammation.

Have you been diagnosed with?

- Rheumatoid Arthritis
- Psoriasis
- Systemic Lupus Erythematosus (SLE)

We are looking for people from across England to volunteer for the IMID BioResource, part of the NIHR BioResource, and take part in future research.*

With your help we want to build a national database of volunteers, to help investigate the links between our health, genes, the environment, and disease.

As a volunteer you'll give a small blood sample and complete questionnaires about your health and lifestyle. NIHR BioResource can then contact you to see if you would like to participate in research studies related or not related to your condition.*
