Biomedical Research Unit

Relatives of patients with rheumatoid arthritis needed to help us PREVeNT RA!

Rheumatoid arthritis (RA) is characterised by joint swelling and stiffness.

We want to study people who are close blood relatives of someone with rheumatoid arthritis, but do not have the disease themselves, in order to identify risk factors for developing RA and find ways to PREVeNT it.

If you have a parent, brother or sister, or child with rheumatoid arthritis but do not have RA yourself, please get in touch!

What you would be asked to do:

- Complete a questionnaire
- Donate a blood sample

If you are interested in taking part, please contact the PREVeNT RA study team:
